FOR IMMEDIATE RELEASE

PhishPatrol, Wombat's Dedicated Anti-Phishing Email Filter, now Available with Fastnet's MailCleaner

St-Sulpice, Switzerland and Pittsburgh, PA - January 31, 2011 – In its drive to make Wombat Security Technologies' solutions available to an ever wider number of companies, Wombat has partnered with Fastnet SA, a leading European provider of anti-spam and anti-virus filters. Under this partnership, Fastnet will offer its customers the option of enhancing its leading MailCleaner product with PhishPatrol, Wombat's dedicated anti-phishing filter.

"With hundreds of millions of phishing emails being sent each day, it is becoming critical for enterprises to have as comprehensive a filtering solution as possible. We conducted extensive tests to evaluate the performance of PhishPatrol and were impressed with the results", said Olivier Bourgeois, Fastnet's CEO.

"PhishPatrol is a unique anti-phishing filter designed to complement existing antispam and antivirus filters. Many email filters today rely primarily on manually maintained blacklists to catch phishing emails. Because these blacklists are often several hours behind, a number of phishing emails continue to slip through. In contrast, PhishPatrol was designed to catch many of the zero-hour attacks and spear phishing emails that would otherwise go undetected", said Dr. Norman Sadeh, Wombat's CEO.

This partnership between two leading providers enables Fastnet to offer its customers a "best of breed" solution and illustrates the company's commitment to keep up with the latest threats in an always changing environment.

"Thanks to Fastnet's extensive network of distributors, this partnership gives us access to a large customer base and further validates our business model of developing partnerships with leading providers of antispam and antivirus filters", added Sadeh.

MailCleaner and the PhishPatrol add-on will be showcased by Fastnet at is booth at CeBIT in March of this year.
