

Rid your IT infrastructure of spam, viruses and Trojans

mailcleaner
antispam & antivirus corporate solution

MailCleaner is a professional anti-spam filtering solution that eradicates all undesirable and dangerous e-mail.

Unlike other filters, MailCleaner is installed between the Internet and your mail server. It quarantines intrusive messages before they ever reach their destination.

MailCleaner offers efficient protection for one or many domains, with no installation required on client PCs.

Today, MailCleaner is used by a number of institutions and corporations both large and small, and also by numerous ISPs, protecting millions of users around the world.

Ask for a free trial or get more information at www.mailcleaner.net.

- ✓ Protects against spam
- ✓ Protects against viruses
- ✓ Protects against dangerous content
- ✓ Compatible with all mail servers
- ✓ Handles multiple domains, multiple user levels
- ✓ Places illegitimate messages in quarantine
- ✓ Users can easily release quarantined messages
- ✓ Automatic status reports
- ✓ User-friendly web-based management interface

MailCleaner is based on a group of sophisticated filtering technologies that work in parallel.

Anti-spam

MailCleaner implements a number of complementary techniques to detect spam. By combining artificial intelligence algorithms and frequent updates, MailCleaner constantly adapts to identify the ever-changing techniques of spammers.

Anti-virus

MailCleaner filters all incoming messages for viruses, worms, and suspicious attachments with potentially dangerous contents.

Web-based User Interface

MailCleaner offers each user a simple way to review quarantine lists, change preferences, and consolidate reports for users who have more than one e-mail address.

Web-based Administrator Interface

The administrator keeps control of all system settings. Detailed traffic and filtering reports give the administrator a clear vision of network and mail activity.

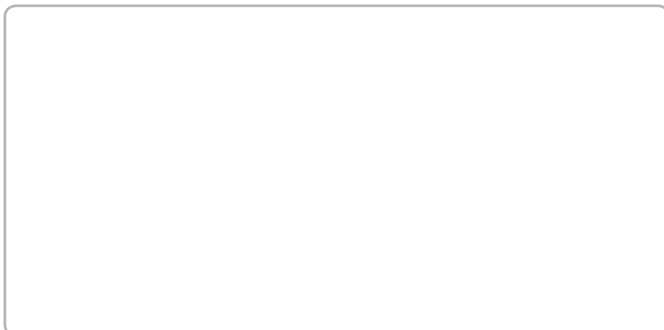

Simple to use

Users maintain total control over quarantine behavior: With a simple click, a user can delete or release any message retained by the filter. Installation requires absolutely no modification to your existing IT infrastructure.

Cloud or Virtual Appliance

MailCleaner offers a variety of Cloud or Appliance versions, each presenting the same features and filtering performances. Depending on your existing infrastructure, you can choose the Virtual Appliance for your office, filtering Services or dedicated Appliance on the Cloud.

Your MailCleaner Partner

Technical details

- Guarantees rate of spam detection.
- Includes antivirus with frequent automatic updates.
- Detects potentially dangerous content.
- Validates recipient address (Callout).
- Implements spammer blacklists such as Spamhaus, Spamcop.net, SORBS, etc.
- Verifies the identity of sending mail servers (SPF).
